

Unit Economics Reference for New SKU Evaluation

Prepared for: Jessey / Conservana Spices — Indonesia Cacao

Reference: Agroverse Ceremonial Cacao (Brazil origin) — actual unit economics

Date: July 2025

Why This Document

Gary asked us to share a concrete reference so you can see what "unit economics ready" looks like. Below is our actual cost stack for ceremonial cacao from Brazil → USA. Use this as a template to build yours for Indonesia → USA.

1. Product Unit: Ceremonial Cacao Kraft Pouch (200g / 8 oz)

Line Item	Cost (USD)	Notes
Cacao nibs (raw material)	\$0.68	Per pouch, farm-gate equivalent
Kraft pouch + packaging	\$0.34	Printed stand-up pouch
Subtotal — landed cost (Brazil)	\$1.02	Before freight

2. Freight: Brazil → San Francisco (per pouch, pallet scale)

Based on ~200 kg air freight shipment:

Line Item	Cost (USD)	Notes
Air freight (airport to airport)	\$3.50/kg	Tier rate for 200 kg
Export documentation	\$95 flat	Spread across shipment
Inland transport (Brazil)	\$695 + 0.15% cargo value	Farm → airport
Brazil airport charges	\$0.30/kg	Min \$250
US terminal / handling / customs	~\$487 flat	Terminal + handling + clearance
FDA processing	\$100	Required for cacao
MPF + bond	~\$50	Customs fees
Total freight per pouch (200g)	~\$1.80	At 500 pouches per shipment

3. Full Landed Cost Stack (per 200g pouch)

Layer	Cost	% of Total
Raw cacao + packaging	\$1.02	27%
Freight Brazil → US	\$1.80	48%
Landed cost (SF warehouse)	\$2.82	—
DAO overhead / operations	\$0.50	13%
Wholesale price (to retailer)	~\$8.50	—
Retail shelf price (typical)	\$18–\$22	—

Key insight: Freight is the dominant cost — ~48% of landed cost. This is why shipment scale matters.

4. Tree Financing per Bag

Our model: **1 bag sold = 1 tree planted in the Amazon.**

Item	Cost
Tree seedling + planting	\$0.93 per tree
Baked into wholesale price	~\$0.93 per bag
Trees financed to date	Tracked on truesight.me

5. What We'd Need from You (Template)

To evaluate Indonesia-origin cacao, fill in these numbers:

5.1 Raw Material

- **Cacao nibs cost per kg** (farm gate, Indonesia): \$___
- **Processing / fermentation / drying per kg**: \$___
- **Packaging per pouch (200g)**: \$___
- **Total raw + pack per pouch**: \$___

5.2 Freight: Indonesia → USA

- **Air freight rate per kg** (Jakarta → LAX/SFO): \$___
- **Inland transport (farm → airport)**: \$___
- **Export documentation**: \$___
- **Indonesia airport charges**: \$___
- **US customs / FDA / handling**: \$___
- **Total freight per pouch (200g)**: \$___

5.3 Full Stack

- Landed cost per pouch: \$____
- Target wholesale price: \$____
- Tree planting cost per bag: \$____
- First shipment volume (units): ____

5.4 Financing

- **Source of capital:** Farmer-funded / Investor-funded / Other
- **If investor: expected return / terms:** ____
- **If farmer-funded: payment timeline:** ____

6. Next Steps

1. Fill in the template above
2. Share with Gary for review
3. Once numbers work → dedicated transparent ledger on truesight.me
4. First consignment shipment to USA network

This document is a reference template based on Agroverse's actual Brazil → USA unit economics. Your numbers will differ — that's expected. The goal is to have a shared framework for the conversation.
