

Pará Farm Dossier — Recent Field Visits

Prepared for Gary Teh · TrueSight DAO / Agroverse · CEPOTX cacao network

Compiled from FDA-FSVP site-visit reports, SunMint plot registry, and the farm-media archive (farm_media_manifests).

How to read this dossier

Every figure below is tagged with where it came from: **CEPOTX registration**, **SunMint GPS-walk hull**, **on-camera farmer narration**, or **visual observation**. Where a number is *claimed by the farmer* but not yet reconciled against a CAR/INCRA boundary walk, it is marked *claimed — needs walk*.

Two honest caveats up front:

- **Average tree age is mostly NOT on record.** Only three farms carried an age statement at all (Cacau na Veia, Sítio Torres, Santa Rosa). For the rest, the visit notes say only "mature grove" or "younger renovation planting" — no year figure. A true average per farm would require asking Raimundo, Ana Lucia, Cleide, Paulo and Ednaldo directly at the next contact.
- **Variety is farmer-attested, not lab-verified.** Cacao pod morphology is not reliably diagnostic; we record the farmer's own words ("híbrido", "verdadeiro", "CCN-51 Ponta Verde") rather than guess from photos.

At-a-glance summary

Farm	Site code	Owner / host	Coop	Municipality	Area (ha)	Tree age	Variety (as stated)
Rancho Maranta	RM-P1 / RM-P2	Jedielcio family	CEPOTX	Altamira region	0.40 planted + 5.0 proposed	not recorded	CCN-51 "Ponta Verde" (grafted) + common
Santa Anna Fazenda	B-06-58	Ana Lucia Araujo de Sousa	COOPOXIN	Altamira region	3.0	"mature" (no figure)	not stated
Sítio Raimundo & Geniza	U-06-07	Raimundo Silva & Geniza	COPOPS	Uruará	0.32	family line since 1980; young renovation grove	Trinitário × Forasteiro hybrid
Fazenda Santa Rosa	U-06-06	Antônio & Graça	COPOPS	Uruará	≈ 4.75	~40 yrs (narration)	hybrid (narration); native shade
Fazenda Dona Rosa	pending	Rosa Wronski	COOPOXIN	Medicilândia	0.14 (walk hull)	"mature" (no figure)	not stated

Farm	Site code	Owner / host	Coop	Municipality	Area (ha)	Tree age	Variety (as stated)
La do Sítio	V-06-29	Paulo Barbosa do Nascimento	CEPOTX	Altamira region	5.56 (+ 0.84 reforestation)	not recorded	not stated
Fazenda Cleide	B-06-108	Cleide Maris Suk & Marcelo	COOPOXIN	Altamira region	114.0	not recorded	not stated
Sítio Cacau na Veia	N-06-37	Jader A. da Silva Santos (CEPOTX President) & wife	COOPCAO	Pacajá	30.0 claimed (8 forest + 22 cacao)	35+ yrs, some 40+	hybrid cacao in SAF
Sítio Torres	N-06-66	Alexandre (CoopCao director-coordinator)	COOPCAO	Pacajá	4.5 claimed (walk hull 19.14)	blocks of 2 / 4 / 5 yrs + a >20 yr block	cacao "verdadeiro / híbrido" + small clonal block
Sítio Cristo Rei	CR-PA-P2	Ednaldo (Copical / CEPOTX)	CEPOTX family	Anapu	≈ 0.96 (~1 ha, ~1,000 trees)	new planting (1,300 cloned seedlings)	cloned cacao, mixed varieties

Areas: CEPOTX-registration or SunMint GPS-walk hull unless marked "claimed". The GPS hull is the visited segment only — it usually under-counts a whole property (see notes).

The farms in detail

Sítio Cacau na Veia — N-06-37 (Pacajá)

The clearest age data of the whole trip. Farm is a **mature hybrid cacao agroforest (SAF), 35+ years old, some trees 40+**, under native Amazonian forest shade. On camera the farmer gives the full picture: **30 ha claimed — 8 ha forest + 22 ha cacao (~22,000 plants)**; the GPS walk hull across the visited corner is only 3.02 ha, so the boundary still needs a CAR/walk. This is the **CEPOTX President's own family property** (Jader Adriano da Silva Santos & wife), managed for **selective, fermented specialty** rather than common commodity. A failed reforestation patch (drought-killed) is slated for replanting as sub-plot N-06-37_20260909_restoration_1 (0.74 ha). Post-harvest: traditional wooden barçaça fermentation + covered raised drying racks.

Sítio Torres — N-06-66 (Pacajá)

Recorded on the farm as "Sítio 2" (the Wi-Fi SSID on site reads *SITIO TORRES*). A family holding of **Alexandre, a CoopCao director-coordinator** (his coop has ~8 registered properties). The grove is **multi-aged blocks — roughly 2 / 4 / 5-year plantings plus a >20-year block further up** — interplanted with **cumaru** (native Amazon shade), and the older plot still holds **castanheira and mogno (mahogany)**

trees the walkers estimated at **100+ years**. Cacao is described as "**verdadeiro / híbrido**" with a small clonal block. Area **4.5 ha claimed for the cacao blocks**, though the GPS walk hull across nursery + mature blocks spans 19.14 ha. ~120 kg was sampled on the visit; the first target lot is 600 kg.

Sítio Cristo Rei — CR-PA-P2 (Anapu)

The most *forward-looking* site: **former cattle pasture being converted** to cacao under an agroforestry system, with an active **nursery holding 1,300 cloned cacao plants** counted in the ground. The plot being restored is **~1 ha / ~1,000 trees, mixed varieties**; an irrigation system is installed and running (the walker notes the water pressure and layout differ favourably from the Bahia farms). Media also captured a **generational-handover moment — young farmers taking on field roles**. Owned by **Ednaldo, partner at Copical** (a CEPOTX-affiliated outfit); the family property is not yet managed by the cooperative.

Fazenda Santa Rosa — U-06-06 (Uruará)

A family plot of **Antônio & Graça** in the Transamazônica corridor. **≈4.75 ha** per the SunMint registration. Visited 3 Sep 2026: **mature cacao trees with pods on trunks (cauliflory), healthy canopy, no visible disease**, with an **existing grove plus a restoration area**. On-camera narration references trees "**40 years old**" and a **hybrid**; ground management is **regenerative agroforestry with native shade and ground cover**, organic under the COPOPS/CEPOTX (IBD NOP) network.

Sítio Raimundo & Geniza — U-06-07 (Uruará)

Raimundo Silva (COPOPS Presidente) & Geniza — a married couple on a **≈0.32 ha** family smallholding. Their cacao line runs deep: **the family has farmed cacao since 1980**, but the current grove is described as a "**renovation planting**" — a **younger grove** set alongside existing mature trees, with a **4 m mechanisation / 3 m irrigation row layout**. Cultivar noted as a **Trinitário-forasteiro hybrid**, managed organically (stated **IBD NOP since 2006** — narration only, no certificate on file). Raimundo rebuilt the **barcaçá as a permanent wooden structure "to focus on quality cacao"**; sun-drying is on a dedicated "estação de sol" thin-layer platform.

Fazenda Santa Rosa to Rancho Maranta — the Altamira cluster

Rancho Maranta (Jedielcio family, RM-P1 0.40 ha planted + RM-P2 5.0 ha proposed) is where our **variety dossier** was captured. A Jedielcio-led walkthrough yielded the farmer-attested pair: **(A) CCN-51 "Ponta Verde" — a grafted clone that fruits all year** — versus **(B) common / traditional cacao — seed-planted, deeply furrowed pods, pointed tip, red-purple when ripe, strongly seasonal**. "Ponta Verde" is a local/biotype name, not an official registry denomination.

Santa Anna Fazenda (B-06-58, Ana Lucia Araujo de Sousa, COOPOXIN, ~3 ha per CEPOTX registration) shows **mature cacao, cauliflory, healthy canopy, no visible disease**, with wooden fermentation boxes turned by hand on a **5–7 day protocol** and an open-sided drying shed.

The bean-to-bar / estate tier

Two larger properties anchor the processing story:

- **Fazenda Cleide (B-06-108, Cleide Maris Suk & Marcelo, COOPOXIN) — 114 ha.** Visited post-construction 8 Sep 2026: a **completed factory, equipment operational** — fermentation tanks, roaster, winnowing & cracking, melanger, cacao-juice (honey) press, chocolate moulding, cold-hold fridge and storage.
- **La do Sítio (V-06-29, Paulo Barbosa do Nascimento) — 5.56 ha plus 0.84 ha of reforestation sub-plots.** The new **bean-to-bar facility (stage 1)** houses an **ATF FPR-20N PLUS stainless roaster, a compact cracker/winnow, and a bar-making cold-hold refrigerator**; melanger, tempering and moulding are the next build-out (not yet installed, not yet verified).

Smaller but notable: **Fazenda Dona Rosa** (Rosa Wronski — "Dona Rosa Chocolates", COOPOXIN, Medicilândia) — a **mature evening-walk grove** with fermentation box, drying platform, a countertop roaster and a stainless melanger; site code still **pending CEPOTX assignment**.

Open data gaps

- **Average tree age per farm** — recorded for only 3 of 10 farms; a one-question ask at next CEPOTX/Jedielcio contact would close it.
- **Variety verification** — all labels are farmer-attested; no genetic/organoleptic confirmation.
- **Boundary reconciliation** — Cacau na Veia (30 ha claimed vs 3.02 ha hull), Sítio Torres (4.5 vs 19.14 ha), and Sítio Raimundo (0.32 ha) all need a CAR/INCRA or full-walk upgrade from `approx`.
- **Organic certificate** — "IBD NOP since 2006" is narration-sourced; the certificate itself is not on file.
