

TrueSight DAO (TDG) vs. Impact Token Project (ITKN)

Comprehensive Comparative Analysis

Prepared by Sophia Truesight, TrueSight DAO Autopilot — July 2025

Executive Summary

Two projects, both aiming to tokenize social and environmental impact — but one is a 2017-era pitch deck that never shipped, and the other is a living, earning, shipping DAO with real cacao, real QR codes, and real revenue.

Dimension	Impact Token Project (ITKN)	TrueSight DAO (TDG)
Status	Dormant — site from ~2017–2018. No token contract, no exchange listing, no evidence of launch.	Live and operational. TDG actively issued. Edgar API running. DApp deployed. Real cacao supply chain.
Core Thesis	"Mining Good" — capture and monetize social impact creation via a token representing blended value.	"Heal the world with love" — restore 10,000 hectares of Amazon rainforest through profitable social ventures.
Token Type	ITKN — cryptocurrency. Unclear if utility, security, or payment token.	TDG — governance token . 1 TDG = \$1 contributed OR 100 TDG = 1 hour participated.
Supply Model	Not publicly disclosed. "Token Sale Structure" image on site — unreadable.	Contribution-based issuance. Tokens are earned, not bought. Airdropped at solstices/equinoxes.
Blockchain	Unspecified (likely Ethereum ERC-20, 2017 era).	Hybrid. Off-chain Google Sheets ledger + Solana USDT vault. RSA-2048 digital signatures.
Real Economy Tether	None visible. No product, supply chain, or revenue operation shown.	Strong. Real cacao from Brazil, QR-coded inventory, Stripe sales, freight logistics, farmer agreements.
Team	Mark Hubbard (CEO, ex-investment management). Advisors: Jed Emerson (blended value pioneer). Strong credentials, no delivery.	Gary Teh (Governor), distributed contributors. Smaller names — shipping product daily.
Transparency	Low. No public ledger, no on-chain activity, no open-source code. Whitepaper behind email gate.	High. Full Google Sheets ledger public. 30+ open-source repos on GitHub. Edgar API fully documented.
Token Utility	Unclear. "Mining Good" suggests earning ITKN for impact, but mechanics undefined.	Clear. TDG = voting rights on DAO fund allocation. Asset-per-TDG ratio tracked. Daily buy-back budget.
Distribution	Likely ICO / token-sale model.	Contribution-based airdrops. No ICO. No founder pre-mine.

1. Theory vs. Practice

ITKN is a white paper project — a beautifully designed Squarespace site with a compelling narrative ("The Holy Grail of Impact Investing"), impressive advisor names (Jed Emerson, Bibiana Ferraiuoli), and a grand vision. But there is **zero evidence of execution**: no token contract on any chain, no GitHub organization, no product, no revenue, no community. The site has not been meaningfully updated since ~2018. It is a pitch deck, not a protocol.

TrueSight DAO is the opposite — rough edges, smaller names, but **shipping**. Real cacao moving through a real supply chain. QR codes on real bags. Real Stripe transactions. A working DAO API (Edgar). A ledger that updates daily. The whitepaper is a living document on truesight.me, not a PDF behind an email gate.

2. Token Model: Buy vs. Earn

This is the single most important difference between the two projects.

ITKN model (2017 ICO era):

- Investor buys tokens in a token sale
- Hopes price appreciates through speculation and narrative
- No mechanism tying token value to real-world impact creation
- Incentive: financial speculation

TDG model (contribution-backed governance):

- Contributor **earns** tokens through real work (1 TDG per \$1, 100 TDG per hour)
- DAO profits from real businesses (cacao sales) buy back TDG, creating a value floor
- Token grants voting rights on DAO fund allocation
- Incentive: build the DAO → DAO profits → TDG value rises → more impact

ITKN asks you to *buy* impact. TDG asks you to *build* impact.

3. Real-World Asset Backing

ITKN has no visible connection to any real-world asset, business, or revenue stream. The entire value proposition rests on "monetizing social impact" — a concept that remains undefined in public materials.

TrueSight DAO has:

- **Physical inventory**: Ceremonial cacao in warehouses, tracked by QR code per bag
- **Revenue**: Stripe sales to end customers (agroverse.shop)
- **Supply chain**: Farmer purchase agreements, freight logistics, consignment model
- **Asset-per-TDG ratio**: Calculated daily from the off-chain asset balance sheet

- **Buy-back mechanism:** Daily budget calculated from treasury yield
- **QR-coded provenance:** Every bag traceable from farmer to end customer

4. Technical Architecture

Component	ITKN	TrueSight DAO
Smart contracts	None found on any chain	Edgar API (Rails) + Google Apps Scripts
Ledger	None public	Google Sheets (full transparency, publicly accessible)
Authentication	Not specified	RSA-2048 digital signatures per contributor
QR code system	None	Agroverse QR system — every bag serialized
API	None	edgar.truesight.me with full documentation
Source code	None	Open-source on GitHub (30+ repos)
Web app	Squarespace landing page	truesight.me + agroverse.shop + DApp

5. Mission Alignment

Both projects aim at social/environmental impact, but the concreteness differs dramatically:

ITKN: "The Holy Grail of Impact Investing" — abstract, philosophical, no measurable target. References a \$10T industry but offers no mechanism to capture it.

TrueSight DAO: "Restore 10,000 hectares of Amazon rainforest" — specific, measurable, and directly tied to the business model. Cacao is an agroforestry crop: it reforests land while generating revenue. Every bag sold = trees planted.

6. What TrueSight DAO Can Learn from ITKN

Despite being dormant, ITKN has genuine strengths worth studying:

Narrative polish. The "Mining Good" concept is elegant. "Capturing and monetizing the creation of social good" is a powerful framing. Our "heal the world with love" is beautiful but less immediately graspable as an investment thesis.

Advisor credibility. Jed Emerson literally coined "blended value." Having a pioneer like that on the advisory board signals legitimacy to the impact investing world.

Design quality. The Squarespace site is clean and professional. Our truesight.me could benefit from that level of polish.

The "Holy Grail" framing. ITKN correctly identified that the \$10T impact investing industry lacks a liquid, tradeable unit of impact. That gap is still open. TDG could be that unit.

7. What ITKN Missed That We Have

Execution over narrative. ITKN had the story but no product. We have the product but need a better story.

Earned tokens over bought tokens. The contribution-based model creates real alignment. ICO tokens attract speculators; earned tokens attract builders.

Real revenue over impact theater. Cacao is a real business with real margins. "Impact" without revenue is charity; impact with revenue is sustainable.

Transparency by default. Our Google Sheets ledger is more transparent than 99% of crypto projects. That is a structural moat.

QR-coded physical supply chain. This is genuinely novel — bridging physical cacao bags to on-chain (or on-sheet) provenance. ITKN had nothing like this.

8. Verdict

ITKN is a cautionary tale, not a competitor. It represents the 2017 ICO era at its most aspirational — big names, big vision, zero delivery. The site is a digital fossil.

TrueSight DAO is what ITKN wished it could be — a real DAO with real products, real revenue, real transparency, and a real path to the mission. The gap is entirely in *narrative packaging*: we need to tell our story as compellingly as ITKN told theirs, but with the receipts to back it up.

Strategic recommendation: Position TDG as *the* working answer to the question ITKN posed — "How do you capture and monetize social impact creation?" — because we are actually doing it, with cacao as the proof point. Their "Holy Grail" framing is still relevant; we just need to claim it with evidence.
