

IVY (Liv for Yoga) — Cohort Onboarding Plan

IVY (Liv for Yoga) — cohort credentialing onboarding: plan of record

Status: plan-of-record, drafted 2026-08-18 by Claude (interactive session, Gary driving). Second program on the TrueSight DAO credentialing platform, following the same shape as [Butterfly Effect](#) (BUTTERFLY_EFFECT_COHORT_ONBOARDING_PLAN.md).

Companion docs (read before executing): - credentials/CREDENTIALING_COHORT_PROGRAM_ONBOARDING.md — the canonical operator playbook this plan instantiates - credentials/CREDENTIALING_PLATFORM.md — overall data model - [butterfly-effect-club/PROPOSAL.md](#) — the v4 architecture decision log this program reuses verbatim

Source context: WhatsApp Chat - ERA DAO.zip (~/), messages 8/17–8/18/26. Bilal (ERA Professionals) is building IVY, a yoga-teacher-training certification based on Olivia's "Liv for Yoga" curriculum (Bikram Chaudhry's 26-posture regimen lineage). First real cohort not until fall 2027 — **no launch urgency**; this plan stands up the infrastructure now while it's easy to get right.

0. Naming decisions (locked)

Item	Value	Rationale
program_slug	ivy-yoga	Matches the service account Gary already created (ivy-yoga@get-data-io.iam.gserviceaccount.com) — follow the name already in motion rather than invent a new one.
Subdomain	ivy-yoga.truesight.me	.truesight.me, same pattern as butterfly-effect-club.truesight.me... adjusted to slug form for consistency with the SA/manifest slug.
GitHub repo	TrueSightDAO/ivy-yoga-club	-club, per the template's own fork-name convention (CREDENTIALING_COHORT_PROGRAM_ONBOARDING.md §5.2).
Workspace path	/opt/claude_workspace/ivy_yoga_club	Underscored, mirrors butterfly_effects_club/ local convention.
display_name	IVY	As used by Bilal throughout the WhatsApp thread.
partner_organization	ERA Professionals	Same parent org as Butterfly Effect.
Lineage note for copy	"based on Olivia's Liv for Yoga training program, rooted in Bikram Chaudhry's 26-posture regimen"	Bilal's own wording, 8/17/26 12:08 PM.

1. Pre-flight (§5d — every cross-repo fact an execution unit needs, captured here)

All of the following were verified live during this planning session — no execution unit needs to re-discover them:

- 1. **Roster sheet (already created by Bilal, shared by Gary):**
https://docs.google.com/spreadsheets/d/1IrzM8z9X0bt-1Zp21s6DNx1L_1XaT-8Fq6e3YaQRcnU/edit

2. **Central tokenomics credentialing GAS already resolves this sheet — live-tested 2026-08-18:** GET [https://script.google.com/macros/s/AKfycbytzZtEhKEHCmxoSbhQXrg5Clc7imS24BFT134nu9yN4QvMCuQfhzEHgbuT8PRYcxgtGQ/exec?action=list_sheet_editors&sheet;_url=>{"status":"ok","editors":\["garyjob@agroverse.shop","garyjob@gmail.com","danesh@onemarketcapital.com","arshad@onemarketcapital.com","bilal@onemarketcapital.com","shahbaz@onemarketcapital.com"\]}](https://script.google.com/macros/s/AKfycbytzZtEhKEHCmxoSbhQXrg5Clc7imS24BFT134nu9yN4QvMCuQfhzEHgbuT8PRYcxgtGQ/exec?action=list_sheet_editors&sheet;_url=>{) Confirms **no tokenomics-side code change is needed** (matches playbook §5.4 — "No tokenomics work needed"; the central handler is generic across programs). This endpoint value is the tokenomics_admin_endpoint to put in the IVY manifest — same URL as Butterfly Effect's, verbatim.

■ **Open item, not blocking:** ivy-yoga@get-data-io.iam.gserviceaccount.com (the SA Gary shared the sheet with) does **not** appear in the list_sheet_editors response above. The humans who matter (Bilal, Shahbaz, Gary) do resolve correctly, so admin-panel auth will work. But if a future local/CI script needs to read the sheet via that SA's JSON key (~/.ivy_yoga_google_private_key.json), verify the share actually landed — re-share from the Sheet's own "Share" dialog if the SA still doesn't show as an editor there.

1. **Real manifest schema to model IVY's on** (not the older placeholder in the onboarding playbook — this is the file actually in production today): truesight_me/programs/butterfly-effect/manifest.json. Full field list: schema_version, program_slug, display_name, partner_organization, partner_url, partner_contact_label, tagline, description_md, co_brand{partner_logo_url,primary_color,secondary_color}, source_pages[], membership_filter{primary_program}, credential_visibility_default, issuer_lineage_root, status, certificate{strategy,available, label}, program_mode, roster_sheet_url, roster_tab, audit_trail_tab, admin_panel_url, program_repo, tokenomics_admin_endpoint, last_reviewed.

2. **Fork target confirmed to exist:** TrueSightDAO/program-template (default branch main) — sanitized mirror of butterfly-effect-club with TODO placeholders, per CREDENTIALING_COHORT_PROGRAM_ONBOARDING.md §5.2/§6.

3. **DNS precedent (Explorya AWS account 440626669078, Route53 zone Z0032474227N6EQ3Z4QU for truesight.me):** existing record — butterfly-effect-club.truesight.me. CNAME 300 truesightdao.github.io IVY's record will be the identical shape, just the new subdomain. truesight.me DNS lives in the **Explorya** AWS account, not Nelanco — use AWS_ACCESS_KEY_ID_EXPLORYA / AWS_SECRET_ACCESS_KEY_EXPLORYA from truesight_autopilot/.env.

4. truesight_me **local clone tracks the beta repo**, not prod: origin = TrueSightDAO/truesight_me_beta. Per the beta-first rule (WORKSPACE_CONTEXT.md §3f), this plan lands the manifest in **beta only**. Promotion to truesight_me_prod (gh repo sync) is a **human-only, explicitly-requested action** — not part of this plan's execution units.

5. ■ **Resolved 2026-08-18 (same session):** Gary hand-delivered "IVY certificate - blank - v1.2.pdf" and the filled "IVY certificate - sample.pdf" (the WhatsApp export had dropped both from its media). Full program name is **Indus Valley Yoga**; co-signers are **Bilal Musharraf** (Founding Board Member) and **Olivia Anselmo** (Creator, Original Hot Yoga Teacher Training, Liv for Yoga LLC). Fonts identified from embedded PDF font-subset names and confirmed against github.com/google/fonts: **Cormorant Garamond** (body/name/dates), **Inter** (labels), **Great Vibes** (the two co-signer signatures). All three are open-source (OFL) — full family files vendored in ivy-yoga-club/cert_template/fonts/ (not the PDF's subsetted glyphs, so any recipient name renders correctly). Overlay coordinates in cert_config.json reverse-engineered by word/image bounding-box extraction (pdfplumber + pymupdf) against both PDFs. Logo extracted from the PDF's embedded image, real brand color sampled as #A84504. Pushed as a second commit on the same ivy-yoga-club#1 PR branch (§3 PR1). **New finding, not yet buildable:** the real design has two overlay field types the platform doesn't support yet — signature_bilal/signature_olivia (rendered only once each co-signer independently attests — this is Gary's dual-signature design, now visible baked into the actual artwork) and a cosmetic certificate_id (IVY-TT--1, no generator exists for the sequence). Both documented with real coordinates in cert_config.json for **PR3** to implement against — see §5.

2. Authorization envelope (§5e — scoped once, for this whole arc)

Per Gary's instruction this session ("go ahead with execution all the way until ready for UAT"):

- **Pre-authorized, no further asks this arc:** creating/configuring TrueSightDAO/ivy-yoga-club (new, empty repo — no prod risk); PRs + merges within that repo; enabling GitHub Pages on it; adding the Route53 CNAME in Explorya (additive DNS record, mirrors an existing working pattern exactly, zero blast radius to other subdomains); PR + merge to truesight_me_beta (not prod).
- **Always gated, not in this plan's scope:** promoting truesight_me_beta → truesight_me_prod (human-only, gh repo sync, per WORKSPACE_CONTEXT.md §3f); any first *real* (non-sample) attestation/certificate issuance — UAT uses sample data only, per Bilal's own 8/18 message ("It will just have a sample name for now").
- **Deferred to a separate decision, tracked but not executed here (see §5 below):** the recertification-button and dual-signature (Bilal + Olivia) feature work — blocked on two open calls Gary hasn't made yet (fee/branding model; whether Olivia re-signs every renewal or only Bilal does).

3. Sequenced plan

Unit	What	Repo(s) touched	Advance
PR0	This plan doc	agentic_ai_context	(auto)
PR1	Fork program-template → ivy-yoga-club; configure config.json/CNAME/README; PR + merge; enable GitHub Pages; add Route53 CNAME	ivy-yoga-club (new), Explorya Route53	(auto — greenfield, no prod risk)
PR2	Add programs/ivy-yoga/manifest.json (Tier-1 DAO-endorsed listing); PR + merge	truesight_me_beta	(auto — beta only)
PR3 (future, gated)	Recertification button (date-gated re-attest) + dual-signature (Bilal + Olivia) columns/flow	tokenomics GAS, ivy-yoga-club, lineage-credentials schema	gate: awaiting Gary's decision on (a) fee/branding model, (b) does Olivia re-sign every renewal
Promote (human-only)	truesight_me_beta → truesight_me_prod via gh repo sync	truesight_me_prod	gate: prod promote — always-stop

PR1 detail: 1. gh repo fork TrueSightDAO/program-template --clone=false --org=TrueSightDAO --fork-name=ivy-yoga-club 2. Clone to /opt/claude_workspace/ivy_yoga_club, branch feature/ivy-yoga-scaffold 3. Edit config.json: program_slug: "ivy-yoga", program_display_name: "IVY", partner_organization: "ERA Professionals", admin_console_url: "https://ivy-yoga.truesight.me/", public_manifest_url: "https://truesight.me/programs/ivy-yoga/manifest.json", schema/config URLs pointed at ivy-yoga-club 4. Update CNAME → ivy-yoga.truesight.me 5. Update README.md placeholders (program name, live surfaces, quick-start paths) 6. Leave cert_template/ as the template's placeholder assets; add a TODO_CERT_ASSETS.md note pointing at the pending Shahbaz hand-off (pre-flight item 7) 7. PR → merge → gh api repos/TrueSightDAO/ivy-yoga-club/pages -X POST -f build_type=legacy -F source[branch]=main -F source[path]=/ 8. Route53: UPSERT CNAME ivy-yoga.truesight.me → truesightdao.github.io, TTL 300, zone Z0032474227N6EQ3Z4QU, Explorya credentials

PR2 detail: copy truesight_me/programs/butterfly-effect/manifest.json shape, substitute IVY values (roster_sheet_url = the IVY sheet from §1.1, admin_panel_url = https://ivy-yoga.truesight.me/, program_repo = https://github.com/TrueSightDAO/ivy-yoga-club, tokenomics_admin_endpoint = the URL verified live in §1.2, description_md drafted from Bilal's framing, status: "active").

4. Resume tracker

RESUME HERE → Gary merges the three open PRs below, then execution resumes at "enable Pages + add DNS" (the back half of PR1). The harness's own permission layer blocks Claude from self-merging default-branch PRs (hard stop, correctly enforced even under an explicit "go ahead" instruction earlier in this session) — every PR below is opened and ready, none are merged.

Unit	PR	Opened	Merged	Deployed/live	Reported
PR0 — this plan	agentic_ai_context#755	■	■ ← needs Gary's merge	n/a	n/a
PR1 — repo scaffold	ivy-yoga-club#1	■	■ ← needs Gary's merge	■ (Pages + DNS blocked on merge)	■
PR2 — truesight_me_beta manifest + program page	truesight_me_beta#293	■	■ ← needs Gary's merge	n/a (beta)	■
PR3 — recertification + co-sign	not started	—	—	—	blocked on Gary (\$5 open decisions)
Promote to prod	n/a	n/a	n/a	n/a	not requested — do not do

Once Gary merges PR1 + PR2: enable GitHub Pages on `ivy-yoga-club` (source: `main` root), add the Route53 CNAME (`ivy-yoga.truesight.me` → `truesightdao.github.io`, Explorya zone `Z0032474227N6EQ3Z4QU`), then run the \$6 UAT checklist.

■ **Pre-flight Completeness (\$5d):** no execution unit in PR1/PR2 requires reading a file/state not already captured in §1 above.

5. Open decisions carried forward (not resolved by this plan)

- Fee / branding model.** Butterfly Effect is CSR-flavored (\$1/certificate → Amazon tree, folded into the Sunmint "network of partners" anti-greenwashing framing). IVY is explicitly commercial (Bilal: training + certification fees + studio-financing margin, three income streams). Whether IVY certs carry the same reforestation fee, sit under the same partner-network branding, or get a distinct commercial structure — Gary's call, not yet made. Doesn't block PR1/PR2 (infra is fee-agnostic); **does** block issuing the first real (non-sample) certificate.
- Recertification scope.** Gary's design: the "Attest" button on an already-certified row re-activates once the last-attestation date passes a per-program staleness threshold (stored in the new manifest, e.g. `recertification_period_days`). Implementable as a UI/GAS gating rule on the *existing* attestation event log — no new field needed, "last renewal" = latest attestation timestamp for that credential. Not yet built (PR3).
- Dual signature (Bilal + Olivia).** Two independent named-role buttons, both required, PDF regenerates only once both land. This is the exact "co-signed credentials... deferred in v1" case `CREDENTIALING_PLATFORM.md` names yoga lineages as the reason to keep the data model open for. Needs `manifest.json.authorized_attestors` to grow from a flat list to role-tagged entries (`program_director`, `lineage_authority`). Open sub-question: does Olivia need to re-sign on every renewal, or just Bilal (her signature being a one-time lineage-provenance fact rather than a time-bound "still active" assertion)? **Confirmed real, not speculative** — the actual v1.2 cert artwork (§1.7) shows exactly this: an underline + printed name/title for each co-signer, with a script ("Great Vibes" font) signature that only renders once that person has attested (visible in `reference_sample_filled.pdf`, absent in `cert_template.pdf`). `cert_config.json` has real coordinates for both (`overlay_fields.signature_bilal` / `signature_olivia`) for PR3 to implement against. Not yet built (PR3).

6. UAT phase (human-tested, beta stack, sample data only — before any real cert circulates)

#	Surface / URL	What to expect	Interaction	Acceptance criterion
1	<code>https://ivy-yoga.truesight.me/</code>	Admin console loads, boots from <code>config.json</code> , shows IVY branding (not Butterfly Effect leftovers)	Open the URL in a browser	Page renders with IVY name/colors, no console errors
2	Same page	Key generation / email registration flow (<code>create_signature.html</code> embed)	Click through, register <code>garyjob@agroverse.shop</code> (or another sheet-editor email)	Edgar sends a verification email; clicking it binds the pubkey
3	Same page, after verification	Reload — should resolve to admin mode	Reload the page	UI shows "pending rows" queue, not a locked-out state
4	IVY roster sheet	Add one sample row (Bilal already said the sheet "will just have a sample name for now")	Add a test instructor name	Row appears in the admin panel's pending queue within the sheet's normal refresh window
5	Admin panel	Click "Attest" on the sample row	Single click	[CREDENTIALING ATTESTATION EVENT] fires to Edgar; roster row's audit columns back-fill (<code>pk_hash</code> , <code>attestation_tx_id</code> , <code>status</code> , etc.)
6	<code>truesight.me/programs/ivy-yoga/credentials/#</code>	Public credential page renders within ~60s of attestation	Visit the URL from the back-filled <code>profile_url</code>	Page shows the sample instructor's credential, cert PDF downloadable, QR present
7	Roster sheet → Audit Trail tab	New row appended	Check the tab after step 5	Row shows <code>processed_at</code> , <code>action</code> , <code>github_commit_sha</code> populated
8	<code>ivy-yoga.truesight.me</code> DNS	Resolves correctly, HTTPS valid	<code>curl -I https://ivy-yoga.truesight.me/</code> or browser	200, valid GitHub Pages TLS cert (may take up to ~1h for cert provisioning after CNAME add)

Pass criterion for the whole arc: all 8 rows pass using the sample row only. Do **not** attest a real instructor until Gary has resolved the two open decisions in §5 and Shahbaz has handed off the real cert template (§1.7).
