

PDF Style Convention — Saffron Monk

> Canonical reference for PDF generation across all TrueSight DAO projects. Every .md document in the DAO's digital infrastructure should have a corresponding .pdf generated using this style.

1. Why This Convention

TrueSight DAO produces many documents — implementation plans, proposals, reports, agreements, runbooks. A consistent visual identity builds trust, professionalism, and brand recognition. The Saffron Monk style is the DAO's house style for all generated PDFs.

Brand name: Saffron Monk

Design principle: Warm, grounded, readable — like a cacao ceremony in document form.

2. Brand Palette

Token	Hex	Usage
Saffron	#C98A2D	Primary accent — header band, decorative elements
Clay	#8A5A1D	Secondary accent — links, secondary headers
Cacao Dark	#3D2B1F	Titles, strong headings
Cacao Mid	#5A4632	Subheadings
Body	#222222	Body text
Muted	#888888	Captions, footer text, page numbers
Rule	#DDDDDD	Table header fill, separators, grid lines
Zebra	#FBF7EF	Light cream — alternating table row background
White	#FFFFFF	Page background, table row background

3. Typography

Element	Font	Size	Leading	Color
Document title (header band)	Helvetica Bold	14 pt	—	White
H1 heading	Helvetica Bold	15 pt	19 pt	Cacao Dark

Element	Font	Size	Leading	Color
H2 heading	Helvetica Bold	12.5 pt	16 pt	Cacao Dark
H3 heading	Helvetica Bold	11 pt	14 pt	Cacao Mid
Body text	Helvetica	10 pt	14.5 pt	Body
Bullet text	Helvetica	10 pt	14.5 pt	Body
Table header	Helvetica Bold	9 pt	12 pt	Cacao Dark
Table cell	Helvetica	9 pt	12 pt	Body
Footer	Helvetica	8 pt	—	Muted
Code/monospace	Courier	9 pt	—	Body

Notes:

- Helvetica is used instead of Helvetica Neue because it's built into reportlab and available on all deployment targets without TTF files.
- Bold is Helvetica-Bold, italic is Helvetica-Oblique.

4. Page Furniture

Header Band

- **Height:** 42 pt from the top of the page
- **Fill:** Saffron (#C98A2D), full page width
- **Content:** Document title in white Helvetica Bold 14 pt, left-aligned at page margin
- **Every page** gets the header band (first page and later pages)

Footer

- **Position:** 28 pt from the bottom of the page
- **Left:** "TrueSight DAO" in Muted Helvetica 8 pt
- **Right:** "Page N" in Muted Helvetica 8 pt
- **Every page** gets the footer

Margins

- **Left/Right:** 60 pt
- **Top:** Header band height (42 pt) + 24 pt clearance
- **Bottom:** 48 pt

5. Tables

All Markdown pipe tables (`| a | b | + |---|---|---`) must render as real tables, never as raw pipe text.

Property	Value
Header row fill	Rule (#DDDDDD)
Row backgrounds	Alternating White / Zebra (#FBF7EF)
Grid lines	0.5 pt, Rule (#DDDDDD)
Cell padding	5 pt left/right, 4 pt top/bottom
Vertical alignment	Top
Column widths	Equal distribution across content width
Header row	Repeated on page breaks

6. Supported Markdown Subset

PDF generators must support at minimum:

Syntax	Renders As							
# Heading	H1 (Cacao Dark, 15 pt)							
## Heading	H2 (Cacao Dark, 12.5 pt)							
### Heading	H3 (Cacao Mid, 11 pt)							
Blank line	Paragraph break (6 pt spacer)							
- item or * item	Bullet with 14 pt left indent							
bold	Bold							
<i>italic</i>	Italic							
	a	b	+	---	---	---		Real table (gray header, zebra rows)

Syntax	Renders As							
---, ***, ____	Horizontal rule to vertical spacing							

7. PDF Generation Workflow

For every significant .md document in the DAO's infrastructure:

1. Write the .md file with full content
2. Generate a corresponding .pdf using the Saffron Monk style
3. Commit both files together (same PR, same branch)
4. The .pdf filename matches the .md filename

Generation tool: Use the generate_pdf tool (available in truesight_autopilot) with content, title, and output_path.

8. Implementation Reference

The reference implementation is in truesight_autopilot/app/tools/pdf_tools.py — the generate_pdf function. All PDF generators across the DAO should match this style.
