

Attention Surfaces — where attention can go, end to end

Operator-curated catalog read by Sophia (*truesight_autopilot*) and the oracle advisory during daily grounding readings. Machine form: `attention_surfaces.json`. Shareable PDF: `ATTENTION_SURFACES.pdf` — regenerate with `python3 scripts/build_attention_surfaces_pdf.py` after editing this file. Roadmap: `ATTENTION_SURFACES_PLAN.md`.

The daily oracle draw gives the **quality of the moment** (I-Ching; QMDJ adds its strategic structure once the extension ships). This catalog gives the **space of surfaces** — the stable map of where attention can go across the TrueSight DAO / Agroverse ecosystem. The advisor's job at reading time is matchmaking: **quality × staleness × mission-weight** → **direct attention to 1–3 surfaces**.

Reading-time protocol (Sophia / oracle advisor)

1. **Read the draw** — hexagram(s), changing lines, advisory summary the practitioner recorded.
2. **Shortlist 1–3 surfaces** that resonate. The trigram affinities below are hints, not rules — staleness and mission-weight outrank resonance.
3. **Check each surface's named signal before recommending.** Recommend from evidence, not vibes. If the tracker is missing or stale, the recommendation is *build/refresh the tracker* — never *do more activity* on an unmeasured surface.
4. **Output per surface:** surface → signal checked + what it showed → ONE concrete next action → one-line tie-back to the mission (10,000 hectares of Amazon rainforest restored).

A reading is a **compass, not a dashboard review** — never more than 3 surfaces.

The ten surfaces (soil → governance)

#	Surface	What lives here	Observable signals	Levers	Staleness hint
1	Origin & Restoration	Trees, farms, Matheus/Brazil ops, ERA/BEC tree issuance — <i>the mission itself</i>	tree-planting ledger events in Telegram pulse; <code>treasury-cache/managed-ledgers/*.json</code> (BEC); <code>SUPPLY_CHAIN_AND_FREIGHTING.md</code>	plantings, farmer relations, BRL purchases	no origin/tree event in 14 days
2	Supply Line	AGL shipments, freight, customs, FSVP, Próspera export entity	Shipment Ledger Listing (Main Ledger); <code>CP...BR</code> Correios tracking; <code>agroverse.shop/shipments/</code> pages; ops-health block in snapshot	financing syndicates, booking freight, compliance docs	shipment in transit with no status change in 14 days

#	Surface	What lives here	Observable signals	Levers	Staleness hint
3	Inventory & Ledger Integrity	Main Ledger, conversions/ repackaging, QR serialization, double-entry health	<code>treasury-cache/dao_offchain_treasury.json</code> ; <code>offchain transactions</code> tab; Agroverse QR codes tab	repackaging runs, reconciliation, serialization batches	snapshot age; unpaired double-entry legs
4	Commerce (online)	agroverse.shop, Stripe, Merchant Center, restock recommender	<code>agroverse-inventory/store-inventory.json</code> ; <code>[SALES EVENT]</code> stream in pulse; Stripe sheet	SKU launches, pricing, feed fixes	days since last online sale event
5	Retail Partner Network	Hit List funnel, partner check-ins, velocity, restocks	Hit List statuses + pipeline-metrics block in snapshot; <code>Partner Check-in</code> tab; <code>partners-inventory.json</code>	outreach, sample drops, restock pokes	partners without a check-in in 30 days
6	Community & Programs	capoeira, BEC, grounding, Aora, credentialing pipeline, cohorts	<code>[PRACTICE EVENT]</code> /attestation stream in pulse; <code>lineage-credentials</code> commits; <code>truestight.me/stats/programs_index.json</code>	new programs, sessions, attestations	programs with zero practice events in 14 days
7	Treasury & Governance	TDG, managed ledgers, proposals/ amendments, trading-dashboard runway	<code>dao_offchain_treasury.json</code> ; goal-progress block in snapshot; proposals repo / Realms	conversions, amendments, runway moves	goals pacing behind in goal-progress block
8	Content & Reach	blog, YouTube, newsletter, LLM discovery surface	<code>truestight.me/stats/*.json</code> ; Agroverse News Letter Emails opens; blog/repo commit activity	posts, newsletter sends, llms.txt extensions	days since last post/ send
9	Infra & Agent Health	Edgar, GAS fleet, Sophia herself, AWS costs, credential vault	monit :2812 endpoints; CloudWatch/Cost Explorer via <code>aws_query</code> ; GH Action failure emails (already polled); <code>OPEN_FOLLOWUPS.md</code> infra items	fix PRs, deploys, key rotation, cost trims	any red monit check; failure email unactioned 48h
10	Frontier	China/Aora launch, Kosovo GO, Krake browser, new bets — open loops not yet in any pipeline	<code>OPEN_FOLLOWUPS.md</code> (the single backlog); <code>*_PLAN.md</code> resume trackers (e.g. <code>AORA_EXPERIENCE_PLAN.md</code>)	the next irreversible step on each open loop	a tracker whose RESUME pointer hasn't moved in 14 days

Mission traceability: Surface 1 *is* the mission. 2–5 fund it (cacao revenue → restoration). 6 grows the human lineage that sustains it. 7 stewards what's been gathered. 8 widens the circle. 9 keeps everything else standing. 10 is where the next 1–8 comes from.

Resonance layer — trigram affinities

*A modern synthesis, not classical practice: the mapping is a prompt scaffold for the advisor, in the same honest-disclaimer convention as `ICHING_QMDJ_EXTENSION.md`. The affinity **suggests**; staleness and mission-weight **decide**.*

Trigram	Quality	Natural surfaces
☷ Earth	receptivity, stores	3 Inventory & Ledger
☵ Water	flow, danger, cash	7 Treasury, 2 Supply Line
☴ Wind	gradual penetration	5 Partner Network, 8 Reach
☲ Fire	visibility, clarity	8 Content, 4 Commerce
☳ Thunder	initiative, launch	10 Frontier
☶ Mountain	stillness, maintenance	9 Infra
☱ Lake	joy, exchange	6 Community & Programs
☰ Heaven	creative order	7 Governance, 1 Mission

When QMDJ ships (`ICHING_QMDJ_EXTENSION.md`), doors/directions gain their own affinity column — e.g. 開門 Open Door → launches (10), 休門 Rest Door → maintenance (9), 生門 Life Door → origin (1).

Maintenance

- Catalog changes are **operator decisions** — edit this file + `attention_surfaces.json` together, regenerate the PDF, same PR.
- Surfaces should stay ~10 and stable; if a surface splits or merges, update Sophia's prompt examples only if the protocol itself changes.
- The advisory snapshot embeds this file automatically (6-hourly refresh); Sophia's box re-syncs it on every deploy and can always `read_repo_file` the live copy.
