

Placard Generation SOP

Purpose: Generate branded landscape placards with QR codes for event table displays (e.g., SF Tech Fest, farmers markets, pop-ups).

Last updated: 2026-06-11

1. Prerequisites

- Python packages: qrcode[pil], pillow, requests
- Agroverse logo file
- GitHub PAT with write access to TrueSightDAO/lineage-assets
- DejaVuSans fonts

2. QR Code Registration

Register the QR code via the GAS web app:

Naming convention: {EVENT}_{COLLECTION}_{YYYYMMDD}_{N}

- Event: e.g., SFTF (SF Tech Fest), FMF (Farmers Market)
- Collection: e.g., FR (Friends of the Rainforest)
- Date: YYYYMMDD of the event
- Number: sequential per event

Example: SFTF_FR_20260612_2

3. Generate Placard

Layout (landscape 1650x1275):

- Top: Saffron banner with event name
- Left: QR code (570px) with "Scan to support..." below
- Right: Collection subtitle, info box (Origin, Collection, Batch, Web link), mission text
- Bottom: Green band with DAO branding
- Border: Saffron rounded border with corner accents

Design rules:

- QR code generated at native resolution (box_size=10, border=4) — never resize
- Agroverse logo embedded in QR center at 22% size
- Text uses word wrap — never let text overflow the right edge
- Info box items: label in gray, value in dark
- Values truncated with "..." if they exceed available width

4. Upload

Upload the placard PNG to TrueSightDAO/lineage-assets/pngs/{QR_CODE}_placard.png

If the file already exists, get the SHA first and include it in the update payload.

5. Verify

Check the raw URL renders correctly:

https://raw.githubusercontent.com/TrueSightDAO/lineage-assets/main/pngs/{QR_CODE}_placard.png

Verify:

- QR code is square and scannable
- No text overflows the right edge
- All text is within box boundaries
- Colors match the brand (saffron #E67E22, green #2E7D32)

6. Troubleshooting

Issue	Fix
QR code looks squished	Generate at native resolution — never resize
Text overflows right edge	Reduce QR size or font size
Text overflows info box	Truncate long values with "..."
Mission text cut off	Use word wrap within available width
GitHub upload 422	File exists — get SHA first
GitHub upload 403	Token lacks write access

7. Quick Reference

```
python3 generate_placard.py --qr-code "SFTF_FR_20260612_2" --event "SF Tech Fest 2026" --collection "Friends of the Rainforest" --origin "Brazilian Amazon Rainforest" --url "agroverse.shop/friends-of-the-rainforest" --mission "Every purchase helps restore 10,000 hectares of Amazon Rainforest through regenerative agroforestry with local farming communities."
```
